

## Mortice Cylinder Locks

### Introduction

The Briton 5700 series is a high quality, heavy duty euro profile cylinder mortice lockcase offering a comprehensive range of functions.

Dimensionally compatible with the 5400 series, the range is available with round and square strikes and forend.

**Note:** when used on fire doors, intumescent packs must be used to maintain fire door integrity.

### Features & Functions

- Galvanised steel lockcase
- Backset 60mm
- Centres 72mm (78mm bathroom function)
- Grade 316 stainless steel single piece round or square forend
- Quick reversible latch allows quick and trouble free on site handing without the need to dismantle the lockcase
- Profiled latch and forend provides very positive location and a smooth, quiet operation
- Satin nickel plated for corrosion resistance
- Positive follower angle (1°) reduces the effect of wear which can lead to lever droop
- Follower spring clip for positive spindle engagement to minimise spindle free movement
- 20mm single throw bolt from 1 turn of the cylinder offers high levels of physical security on sashlock and deadlock variants
- Bolt through fixing holes to DIN 18251
- Escape sashlock with split follower (spindle supplied)
- Guided cylinder screw accurately aligns the fixing to the cylinder
- Cylinder latch function enables the withdrawal of the deadbolt on the first turn, and the latch on the second turn

### IMPORTANT INFORMATION

Briton 5700 series locks have been fire tested with an intumescent kit. Fitting of this kit is essential to comply with fire test and UKCA & CE evidence gained.

Allegion takes no responsibility for locks purchased or fitted without the correct intumescent protection. - **Briton 5000.IP**

### Certification

UKCA Marked (EN 12209) - 5710 (1121-CPR-UK-AG7920)  
- 5720, 5730, 5740, 5750, 5760 (1121-CPR-UK-AG7921)

UKCA Marked (EN 179) - 5760 (1121-CPR-UK-ABB7801)

CE Marked (EN 12209) - 5710 (2812-CPR-AG7924)  
- 5720, 5730, 5740, 5750, 5760 (2812-CPR-AG7925)

CE Marked (EN 179) - 5760 (2812-CPR-ABB7802)

Fire tested to EN 1634-1 for use on fire doors up to 1hr timber / 4hr steel

Certifire Approved (CF741)

Environmental Product Declaration in accordance with ISO 14025 and EN 15803

#### Finishes

All lockcases available in stainless steel with a satin finish.

## General Maintenance

### Mortice Lockcases

There are two principal types of mortice lock, cylinder locks and lever locks.

Cylinder locks are two part locks, having a separate locking cylinder which fits into the lockcase. The cylinder protrudes from one or both faces of the door and accepts the key which operates locking function.

Lever locks have the locking function and keyway integral with the lockcase.

Provided the lock and its hardware have been correctly installed and the door has not been distorted, the lock and hardware should not need to be adjusted or lubricated.

### Types of maintenance

Much of the routine maintenance recommended consists of a combination of visual and mechanical checks, cleaning and lubrication. Look out for the icons opposite which provide a 'quick glance' reminder of the maintenance required.

#### Visual checks

Primarily making a visual check on the product and surrounding door/frame looking for wear, damage, and general condition.

#### Functional checks

Consists of checking that the product operates properly ensuring the door can fully close without any binding or undue force required. Check that any seals or weatherstripping do not inhibit correct operation of the door

#### Check fixings

Fixings need to be checked regularly and tightened when necessary. Check that no projection of fixings prevents the door from swinging freely.

#### Lubricating

The keyway of a cylinder should NOT be lubricated with oil. A light application of powdered graphite may be used.

#### Cleaning

Build up of grease, dust and harmful chemicals should be removed to prevent corrosion and maintain the product finish.

### Mortice Lockcase Maintenance

#### MORTICE LOCKCASES

Primary components of the cylinder lock (opposite) are:

A - Forend

B - Lockcase (cover should not be removed);

C - Latchbolt

D - Follower

E - Deadbolt

F - Cylinder port (on bathroom locks this is replaced by a second follower which is operated by the thumbturn)

G - Cylinder fixing screw.

#### MONTHLY

Check lock forend and lever handles for dirt and grease and wipe clean as directed by the "Care of Finishes" on page 16 of the 'Service & Maintenance Guide'.

#### ANNUALLY

Check that the latch and deadbolt (if appropriate) operate smoothly and that the levers (where fitted) return to the horizontal position.

Check that the latch and/or deadbolt locate fully into their strike plate. Any misalignment of the lock and the strike should be rectified immediately.

Check that the key enters the cylinder (except bathroom locks) smoothly and that the key (and thumbturn if fitted) operates the lock mechanism smoothly.

Check that fixings are tight on the lock and the lever furniture, including the grub screw fixing of the lever handles.

If necessary a small amount of light machine oil can be used around the shank of the levers.
