emergency exit  
hardware

376 Series Spares

**Life Safety - The Importance of Meeting The Standards**

In the event of a fire or other emergency your safety, and indeed your life, depends upon the reliability of the exit devices. You need to know that they will open first time, every time. The new European standards have been developed to provide you with a means of ensuring that you are buying and installing products that you can be sure will operate correctly when they are required.

Briton are committed to not only attaining, but exceeding all the latest standards because they value the lives of everyone who may depend on their products.

**What Are The New Standards?**

BS EN 1125: 2008 applies to panic exit hardware, for use in any building that may be used by the public or someone without prior knowledge of the device. BS EN 179: 2008 applies to emergency exit hardware and should only be used in circumstances where you are sure that the building is not used by people who are unfamiliar with it.

**The Importance of Regular Maintenance**

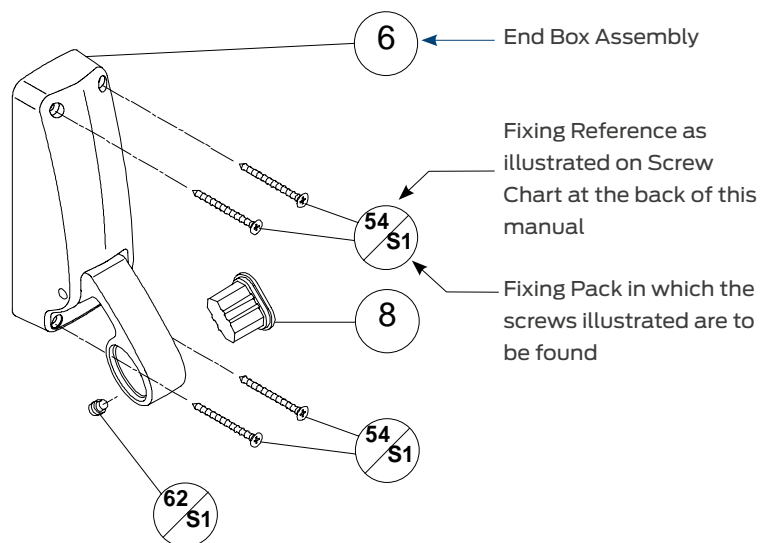

Recommendations laid down under the new standards suggest that the following routine maintenance checks should be undertaken at intervals of not more than one month:

- Inspect and operate the panic device to ensure that all components are in a satisfactory working condition
- Ensure that the keeper(s) is (are) free from obstruction. In heavy use areas these items can suffer abuse and become damaged.

In these circumstances it is imperative that the exit devices are regularly checked to ensure they are kept in good working order and will function effectively when they are needed. To assist you in keeping these products fully operational we have devised this comprehensive Spares Manual to provide you with a detailed list of the individual items that can be purchased.

**How to Use This Spares Manual**

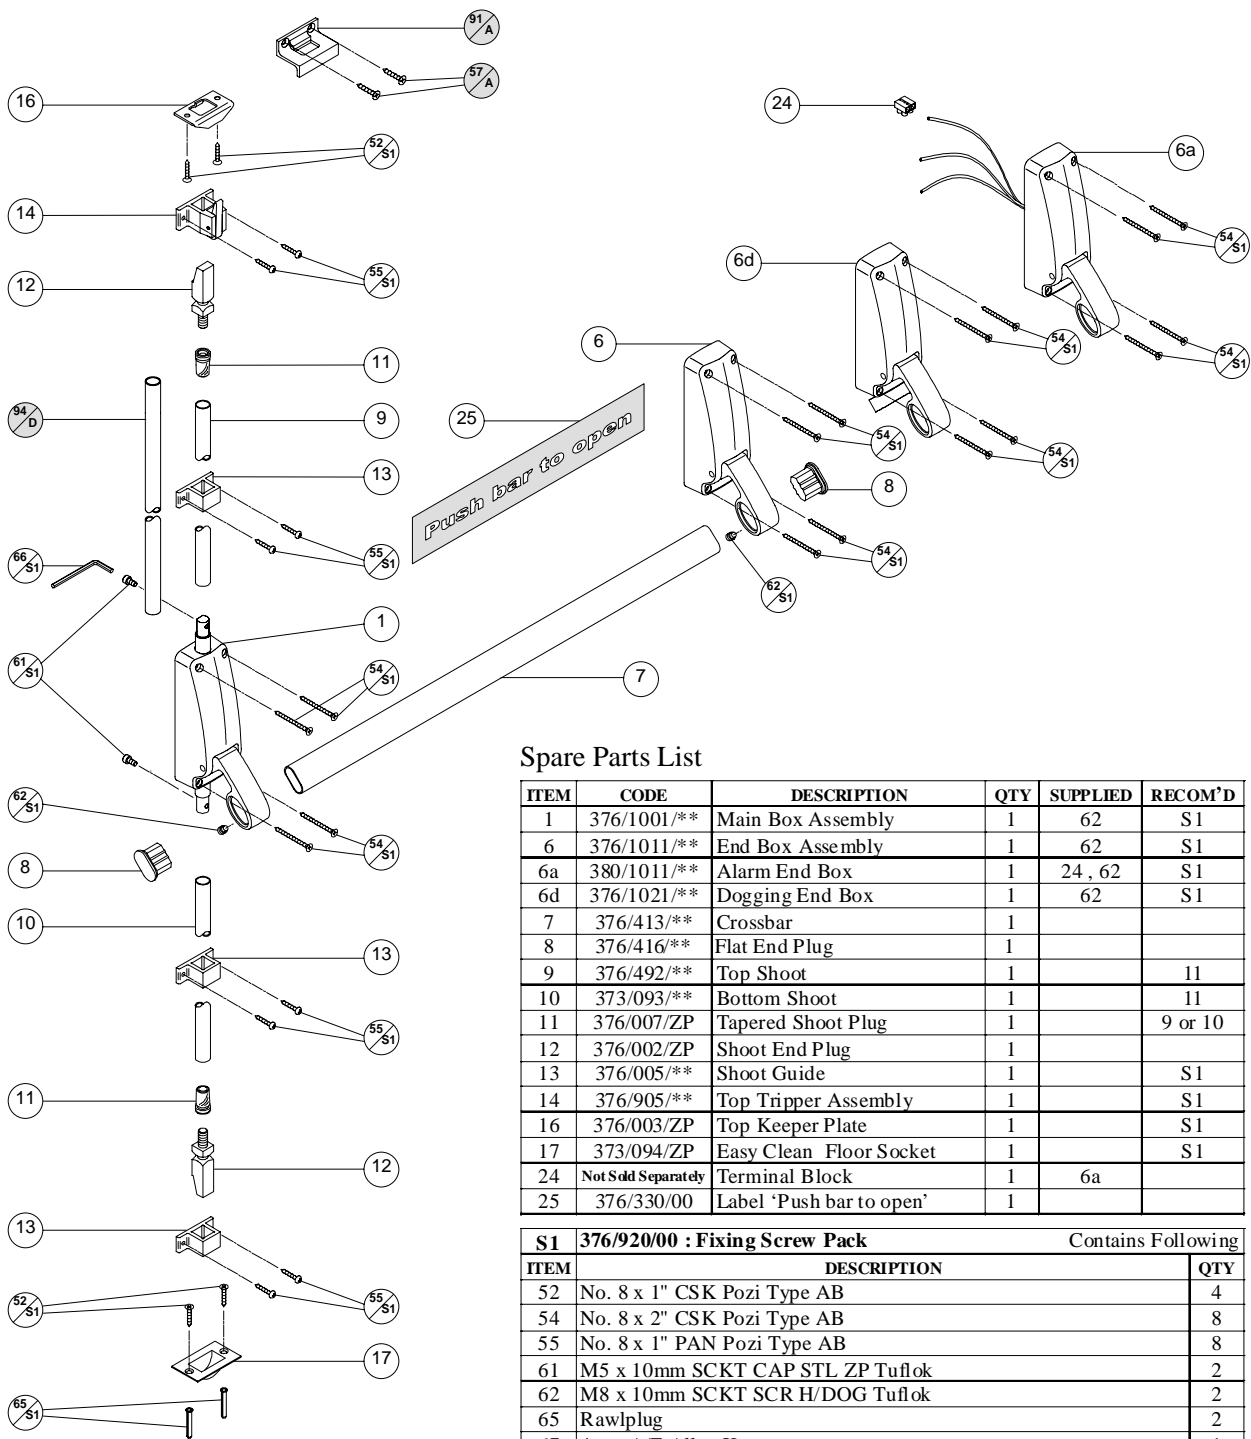

Each item has a unique identification number. They have been classified into spare parts, accessories and screws packs.

**Example:**  
 If you need a replacement end box for a Briton 376 Vertical Panic Bolt

1. Firstly select the exploded drawing of the 376 and identify the part required
2. Identify the items number for the end box (item 6) and appropriate fixing pack (S1)
3. Look up item number in table for product code (item 6 is 376/1011/\*\*)
4. \*\* denotes you must specify the finish required (e.g 376/1011/SE is powder coated silver
5. Check recommendations column for screw pack details and associated items that we advise you purchase with this part
6. You can purchase these items from any Ingersoll Rand stockist. For your nearest supplier contact our Customer Care Centre on 08706 012012
7. Need further help? For technical advice call our Technical Services on 0800 834102
